

# Big Data Analytics

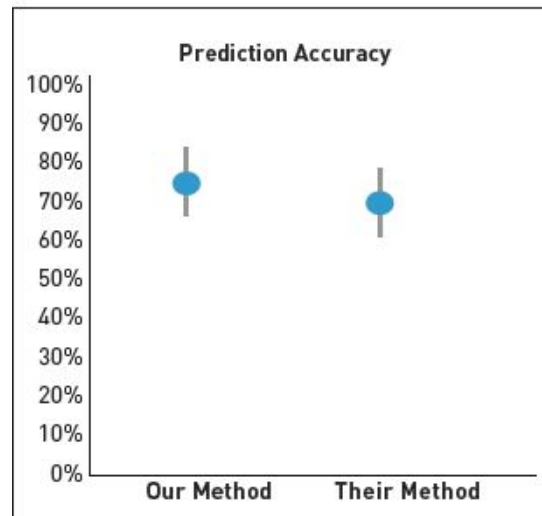

# **Examples of good and bad data visualization**

# Misleading visualization: Proportion

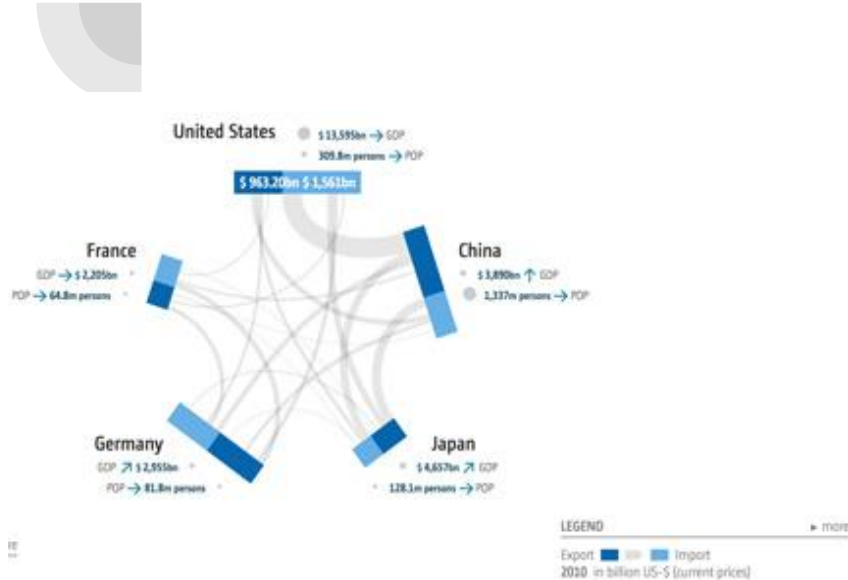

**Misleading scale: the method seems twice as accurate**

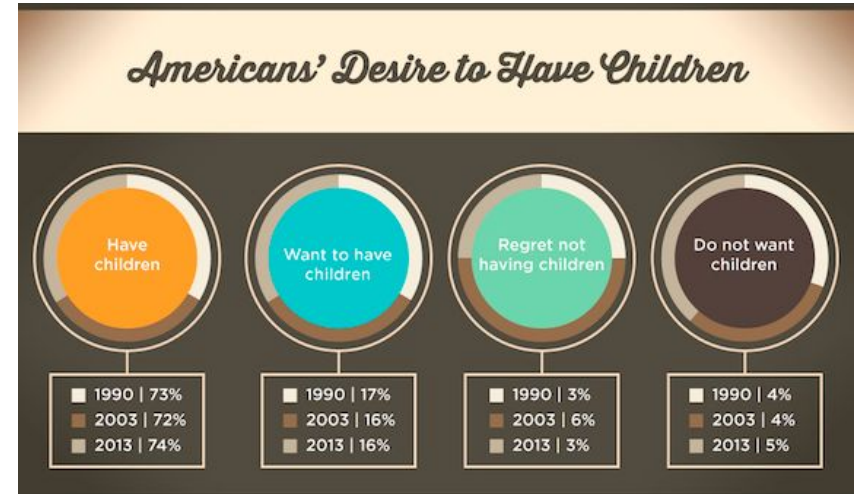

**True accuracy improvement: not very significant**

# Aesthetic is not enough

- Beautiful
- Informative
- Consistent scales
- Clear message

- Numbers don't add up to 100%
- inconsistent choice of dates
- Poor choice of chart for the given data
- Unclear message
